Eclisse Eclisse PVD

by Vico Magistretti

Eclisse

Vico Magistretti
↪ 1967

Best known for the 1967-designed Eclisse, Vico Magistretti was born in Italy in 1920. Trained as an architect, his lifelong passion was minimal, usable design which he implemented in large building projects as well as intimately-scaled fixtures and furnishings for noted companies such as Artemide, Flou and Kartell throughout his 60-year career.

↗ Identity

Inspired by the age of experimenting materials in lighting, Eclisse identifies strongly with Artemide's Human Light philosophy that places men and the pursuit of their well being at the core of research and development.

↗ Icon

What makes the Eclisse iconic is its adaptation of natural eclipsing movement from as early as the 60's. It is a recognizable piece, that has left a revered mark in lighting design.

↗ Avant-Garde

Designed by Vico Magistretti in 1967, the Eclisse is an avant-garde balance between form and function, design and utility. The concept's foundation lies in Eclisse's functionality of adjusting the intensity of light through its rotating inner shade that "eclipses" the light source.

Eclisse is part of the permanent collection of the most important design Museums, amongst many the MoMa in New York and the Triennale Design Museum in Milan.

↗ Limited Edition

To celebrate the 100th birthday of Vico Magistretti, Eclisse has been launched in new special PVD (Physical Vapor Deposition) finishes. The finishes give Eclisse a vibrant, metallic finish in Chrome, Copper, Gold or Black, adding an eye-catching and modern twist to the iconic design.

Available in limited editions starting with the Holiday 2021 season.

↗ Design Intelligence

Vico Magistretti is among the first designers with whom Ernesto Gismondi began a long relationship that generated iconic products that are still contemporary today.

After 50 years, projects such as Eclisse are still an expression of good design, born from functional and productive intelligence.

In Eclisse an elementary gesture allows everyone to shape their own light, a solution that in 1967 won the Compasso d'oro for «the double quality of a high design-aesthetic value and a possible mass diffusion as well as for the novelty of the technical solution».
